Professional Summary

Software Engineer and MERN Stack Developer with hands-on experience developing, integrating, debugging and deploying full-stack web applications using React.js, Node.js, Express.js and MongoDB. Proficient in RESTful API development, JWT-based Authentication and Authorization, Protected Routes, CRUD workflows, server-side pagination, search, filtering, sorting, API integration and responsive UI development. Experienced with Redis caching, TanStack Query, payment gateway integration, third-party service integration, Git-based development and production deployment using Vercel and Render.

Technical Skills

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend Engineering: React.js, React Router DOM, Tailwind CSS, TanStack Query, Axios, Responsive Web Design

Backend Engineering: Node.js, Express.js, RESTful APIs, API Design, API Integration, CRUD Operations

Databases & Caching: MongoDB, Mongoose, Redis, Data Modeling, Database Operations

Security & Payments: JWT, Authentication, Authorization, Protected Routes, bcrypt.js, Razorpay, Payment Integration

Developer Tools & Deployment: Git, GitHub, Postman, VS Code, Vercel, Render, Nodemailer

Software Engineering Concepts: Client-Server Architecture, Server-Side Pagination, Search, Filtering, Sorting, API Caching, Query Invalidation, State Management, Data Validation, Debugging

Experience

MERN Stack Developer Intern

Feb 2026 â Aug 2026

Devlopers

- â Developed and maintained full-stack application features across React.js frontends and Node.js/Express.js backend services, implementing end-to-end business workflows and client-server communication.
- â Built modular, reusable and component-driven React interfaces using React.js, Tailwind CSS and React Router DOM, following responsive UI development practices.
- â Designed and implemented RESTful API services using Node.js and Express.js for resource management, request processing, CRUD operations and MongoDB integration.
- â Implemented JWT-based Authentication and Authorization workflows with token-based identity verification, protected API resources and route-level access control.
- â Integrated third-party APIs and application services while troubleshooting functional issues, debugging API workflows and delivering feature enhancements across web application modules.
- â Utilized Git and GitHub for source-code management, version control, feature development and maintaining collaborative software development workflows.

Projects

AstroGanesh â Production Astrology Platform

Live Website

React.js | Node.js | Express.js | MongoDB | Payment Integration

- â Contributed to a production astrology platform by developing responsive customer-facing interfaces and integrating application workflows across frontend and administrative modules.
- â Developed reusable, component-driven React interfaces with responsive layouts, focusing on usability, consistency, and maintainable frontend implementation.
- â Implemented and enhanced administrative dashboard interfaces for managing platform operations, content, and user-facing service workflows.
- â Integrated online payment workflows, coordinating frontend payment interactions with backend services to support secure transaction flows.
- â Implemented call-based service workflows that enable users to access astrology consultation services through the application interface.
- â Collaborated across application modules to integrate APIs, troubleshoot functional issues, and deliver production-ready features for the live platform.

MegaMart â Full-Stack Grocery E-Commerce Platform

[Live Demo](#)

React.js | Node.js | Express.js | MongoDB | Redis | Razorpay

- â Developed a full-stack e-commerce application using React.js, Node.js, Express.js and MongoDB, implementing product discovery, category management, cart, wishlist and order-processing workflows.
- â Designed and implemented RESTful backend services for products, categories, subcategories, cart, wishlist and orders with JWT-based Authentication, Authorization and protected resources.
- â Implemented Redis-based server-side caching for frequently accessed application data and improved backend data-access workflows.
- â Integrated Razorpay payment processing and Nodemailer-based transactional email workflows for online payments and automated order confirmations.
- â Developed administrative CRUD workflows for product, category and subcategory management with structured frontend-backend API communication.
- â Built responsive, component-driven React interfaces using Tailwind CSS and configured production deployment across Vercel and Render.

Library Management System

[Live Demo](#)

React.js | Node.js | Express.js | MongoDB | TanStack Query

- â Developed a full-stack library management application using React.js, Node.js, Express.js and MongoDB for managing books, authors, categories, users and wishlist workflows.
- â Designed and implemented RESTful API endpoints with JWT-based Authentication, Authorization and protected resources for secure application access.
- â Implemented end-to-end CRUD workflows with server-side pagination, search, filtering and sorting for efficient book-data retrieval and management.
- â Integrated TanStack Query for asynchronous server-state management, API caching, mutation handling, query invalidation and data synchronization.
- â Developed reusable React components and responsive interfaces using Tailwind CSS and integrated the frontend with the production backend API.

Education

University of Allahabad

Bachelor of Commerce (B.Com.)

Expected Graduation: 2027
Prayagraj, Uttar Pradesh
